

Project Update

Weekly Update

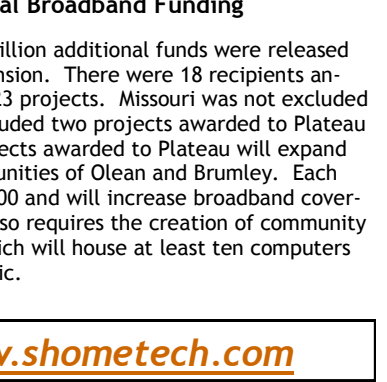

August 29, 2011

We are nearing the installation of fiber into two more Community Anchor Institutions. We anticipate completing the State Fair Community College site later this week and the Sedalia 200 School District is expected to come online next week. As far as construction of fiber routes, the Sedalia to Warsaw innerduct construction stands at 46.5 miles of the 54 mile route. The Linn to Jefferson City route is now up to 15.24 miles of 39 miles complete and the Jefferson City to Linn to Hermann route is at 19.12 miles of the 70 mile route. Below is information about new interactive maps on the MoBroadbandNow website, news about additionally released federal funds for broadband in Missouri, as well as our most recent website posting. Please let us know if you have any questions.

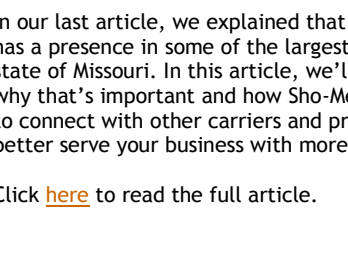

MoBroadbandNow: Interactive Maps

In recent updates, we have discussed the MoBroadbandNow initiative. This group, created by the governor, has taken several steps to try to increase broadband connectivity around the state. The initiative has also worked to unify service providers and get service coverage information out to the public. One of their most recent projects to debut enables Missouri residents to find the available broadband providers in their communities, specific to their exact address. To check out the map and see the broadband options at your house, click [here](#). To learn more about MoBroadbandNow and other information available, click [here](#) to check out their site.

Additional Broadband Funding

On August 22nd, \$103 million additional funds were released toward broadband expansion. There were 18 recipients announced and a total of 23 projects. Missouri was not excluded from the list, which included two projects awarded to Plateau Wireless, LLC. The projects awarded to Plateau will expand broadband in the communities of Olean and Brumley. Each project received \$570,800 and will increase broadband coverage in those areas. It also requires the creation of community centers in each area which will house at least ten computers and be open to the public.

Connection Points

In our last article, we explained that Sho-Me Technologies has a presence in some of the largest carrier hotels in the state of Missouri. In this article, we'll explain a little about why that's important and how Sho-Me Technologies' ability to connect with other carriers and providers allows us to better serve your business with more options.
